¹Including 195,311 furnished for official use.

In 1913 there were received 68,117 applications for mechanical patents, 2,060 applications for design patents, 190 applications for reissues of patents, 7,369 applications for registration of trade-marks, 1,002 applications for registration of labels, and 391 applications for registration of prints. There were 35,624 patents issued, including designs, 164 patents reissued, and 5,065 trade-marks, 708 labels, and 290 prints registered. The number of patents that expired was 21,867. The number of allowed applications awaiting the payment of final fees was 13,567, and the number forfeited for non-payment of the final fees 7,716. The total receipts were \$2,084,417.79, the expenditures \$1,947,383.28, and the surplus of receipts over expenditures \$137,034.51. The total balance to the credit of the Patent Office in the Treasury of the United States on December 31, 1913, was \$7,297,052.46.

In proportion to population more patents were issued to citizens of Connecticut than to those of any other State—1 to every 1,152. Next in order are the following: District of Columbia, 1 to every 1,374; California, 1 to every 1,425; New Jersey, 1 to every 1,576; New York, 1 to every 1,716; Illinois, 1 to every 1,746; Colorado, 1 to every 1,832; Massachusetts, 1 to every 1,861; Nevada, 1 to every 1,949; Rhode Island, 1 to every 2,002; Washington, 1 to every 2,159; Ohio, 1 to every 2,271; Pennsylvania, 1 to every 2,485; Oregon, 1 to every 2,649; Montana, 1 to every 2,849; Arizona, 1 to every 2,878; Michigan, 1 to every 2,900; Idaho, 1 to every 3,043; Wisconsin, 1 to every 3,059; Utah, 1 to every 3,086; Missouri, 1 to every 3,207; Minnesota, 1 to every 3,542; Iowa, 1 to every 3,671; Wyoming, 1 to every 3,743; Indiana, 1 to every 3,788; Maryland, 1 to every 4,083; Kansas, 1 to every 4,124; Nebraska, 1 to every 4,351; New Hampshire, 1 to every 4,394; North Dakota, 1 to every 4,405; South Dakota, 1 to every 4,709; Delaware, 1 to every 5,058; Florida, 1 to every 5,702; West Virginia, 1 to every 6,075; Vermont, 1 to every 6,137; New Mexico, 1 to every 6,296; Oklahoma, 1 to every 6,301; Texas, 1 to every 6,505; Maine, 1 to every 6,570; Virginia, 1 to every 7,109; Hawaii, 1 to every 9,138; Louisiana, 1 to every 9,686. The fewest patents granted in proportion to the number of inhabitants were in the following States and Territories: Philippine Islands, 1 to every 763,543; Porto Rico, 1 to every 229,006; South Carolina, 1 to every 24,514; Missis-

siippi, 1 to every 19,118; North Carolina, 1 to every 13,704; Alabama, 1 to every 11,313; Arkansas, 1 to every 11,166; Georgia, 1 to every 10,963; Alaska, 1 to every 10,726; Tennessee, 1 to every 10,404, and Kentucky, 1 to every 10,043.

As to foreign patents, 1,433 were granted to citizens of Germany; 908 to those of England; 557 to those of Canada; 340 to those of France; 168 to those of Austria-Hungary; 131 to those of Switzerland; 87 to those of Sweden; 63 to those of Scotland; 55 to those of Italy; 54 to those of Belgium; 48 to those of Russia; 45 to those of New Zealand; 41 to those of Victoria; 31 each to those of Mexico and Norway; 28 to those of Denmark; 27 to those of New South Wales; 21 to those of Cuba; 20 to those of the Netherlands; 19 to those of Japan; 17 to those of Ireland; 11 to those of Transvaal; 10 to those of Wales; 8 to those of Argentina; 6 each to those of Brazil, India, and Queensland; 5 each to those of South Australia, Spain, and Venezuela; 3 each to those of Guatemala and West Australia; 2 each to those of Newfoundland, Portugal, and Roumania, and 1 each to those of British Indies, Cape Colony, Ceylon, Chile, China, Danish East Indies, Dominican Republic, Dutch East Indies, Egypt, Ecuador, Isle of Jersey, Java, Panama, and Uruguay.

OTHER DETAILS OF BUSINESS.

The total receipts of the Office for the year aggregated \$2,084,417.79. Of this amount \$1,179,868.91 represents fees received by mail and express, the remainder having been paid by hand to the financial clerk. During the year 194,101 amendments were filed. The number of letters constituting the general correspondence of the Office, indexed and filed, was 249,021. In addition to this 42,355 letters of inquiry were returned with circulars of information answering the questions propounded.

In the work of the Drafting Division 1,063 drawings were made for inventors, who paid \$4,100 therefor; 5,660 drawings already filed were corrected, for which the Office received \$5,762, and 22 tracings were made, at a cost of \$23, a total of \$9,885.50 having been received as fees for the work of the Drafting Division. In addition to this drawings to the value of \$175.50 were made on account of the Office, and 2,388 drawings were corrected without charge to the inventors.

In the Assignment Division 30,288 deeds, con-

taining 13,677,500 words, transferring title to patents, etc., were recorded for which the Office made a charge of \$49,097.90. The number of deeds recorded in the year 1913 was larger by 1,772 than the number recorded in the year preceding. For preparing 1,619 abstracts and 3,825 briefs relating to title the Office received \$2,287.10. The total earnings of the Assignment Division for the year were \$51,385. The fees paid into the Office during the year on account of assignments amounted to \$32,813.90, and the difference between this amount and the total earnings in this branch of the work was charged to miscellaneous deposit accounts which are entered under the general head of "Moneys received for copies."

Type-written copies of records embodying 27,205,800 words, were furnished, and for this work the Office received \$27,205.80. For the certificates attached to a part of these copies the Office received \$1,257.35. In 1904 the Office furnished type-written copies of records embodying 20,949,250 words, for which \$20,949.25 was paid, an increase of 29.8 per cent. in the output in ten years. Inventors and attorneys were furnished with 52,404 photographic prints of drawings, at fifteen cents each, and 7,104 photographic prints of larger size, at twenty-five cents each. During the early part of the year a photostat copying-machine was installed, at a cost of \$2,327.96, and in the few months of its operation has more than paid for the cost of installation.

About five years ago the work of printing the specifications of patents numbered below 32,000 was undertaken, and at this time all patents above 1,670 have been printed. In the near future the Office will be able to furnish a printed copy of the specification and drawing of all patents, commencing with No. 1, issued July 28, 1836.

SURPLUS.

The excess of receipts over expenditures during the calendar year ending December 31, 1913, will be found by the detailed report to amount to \$137,034.51. The surplus will probably be still larger during the coming year.

There is also an accumulated surplus of \$7,297,052.46, as shown by the receipts and expenditures of the Office since it was organized. In addition to this there are 50,000,000 patent copies, constituting the working sets and copies for sale of all patents heretofore issued. These have been paid for out of the receipts of the Office and therefore represent an asset in addition to the surplus. They sell to the number of about eight thousand per day, at five cents each, the total sales for the past year being 2,340,867. The receipts amounted to \$118,043.35.

They therefore represent an investment beyond the surplus above indicated, having a value of nearly two and one-half million dollars, so that the actual surplus of this Office is close to ten million dollars.

CONDITIONS IN THE OFFICE BUILDING.

The crowded condition existing in this Office, which has frequently been called to the attention

of Congress, is steadily growing worse. The patent copies kept for sale, to the number of about forty-seven million, are scattered all over the Office. This fact increases enormously the difficulty of getting them. Moreover, as they are stacked upon wooden shelves and are exposed, the danger of fire is very serious.

Plans were heretofore prepared and laid before Congress, on the basis of which an appropriation of \$220,000 was granted to build a two-story structure in the court. This, in the opinion of the Secretary of the Interior and the officers of this Bureau, would greatly impair the rooms opening on the court. No steps have been taken to carry out these plans. New plans have been prepared providing for a two-story structure under the present level of the court, practically fireproof. It is estimated that there will be room therein to store all the patent copies now kept for sale in the Office and all accumulations for the next fifteen years, and also that there will be storage-room for such records as could not be replaced if destroyed. This structure could be built and equipped sufficiently for our present uses for the sum heretofore appropriated. The Congress is asked to grant authority to use the appropriation in accordance with these new plans. This structure will greatly relieve the congested condition in the Office.

PERSONNEL.

The examining corps in the Patent Office is composed of two Law Examiners, forty-three Principal or Primary Examiners, and three hundred and thirty-four Assistant Examiners, of whom sixty-three are paid \$2,400 a year, seventy-three are paid \$2,100 a year, eighty-eight are paid \$1,800 a year, and one hundred and ten are paid \$1,500 a year. It will be noted that there are more Assistant Examiners receiving only \$1,500 a year than the sum-total of the Law Examiners, the Primary Examiners, and those Assistant Examiners receiving \$2,400 a year. This disproportion of the number in the lower grades to those in the higher grades slows down promotions. This has contributed materially to induce ambitious young men to leave the Office after they have been admitted to the bar.

It is urged that the examining force be reorganized in the following particulars:

1. By restoring the grades of First, Second, Third, and Fourth Assistant Examiners; and
2. By increasing the number in the higher grades and reducing the number in the lower grades, so as to make them equal.

The cost of such increase applied to the present force would be about twenty-three thousand dollars.

I have, however, asked Congress to make the number in each of the four grades eighty-six, which would increase the number of Assistant Examiners by ten, and would increase the pay-roll by about forty-two thousand dollars.

No increase in the number of examining divisions is recommended. While it is difficult for the Primary Examiners to oversee the work of more than six or seven Assistant Examiners, as must be done now in some of the larger divisions, the advantage

to be gained by reducing the number of Assistant Examiners in these large divisions must be balanced against and is believed to be outweighed by the inconvenience of increasing the number of divisions, with the consequent splitting up of the classes of invention among the different Primary Examiners. It is believed, however, that if the number of Primary Examiners were increased by about seven a large amount of needed supervisory work could be accomplished under the direction of the Commissioner. This supervisory work would be directed toward unifying the practice in the different divisions on matters of examination, interference, division, and the like, to the end that there may be a more speedy termination of the prosecution of applications and more certainty of arriving at a correct conclusion.

It may also be noted that in a large corps such as the examining corps of this Office it is highly important that different opportunities should be presented for the exercise of different kinds of ability. As the great work of the Office is done in the examining divisions, the grade of Primary Examiner should be taken as a standard; but some men are qualified to act as Examiners, while others would do better work in some supervisory capacity, and if it were permitted to enlarge the number of Primary Examiners, as above indicated, the value of the services of the Primary Examiners would, it is believed, be increased.

There should also be an increase of two members of the Board of Examiners-in-Chief. At present the Board consists of three members, two of whom constitute a quorum. The increase is necessary for three reasons:

1. The number of cases appealed is so large that there is more work than three men can properly dispose of.

2. Where, because of the necessary absence of one member, an appeal is heard by two members, in the event of a divided Board it is the uniform practice to set down cases for rehearing before the full Board. This increases the work of the Office and the cost to the applicant. With five Examiners-in-Chief, three of whom constituted a quorum, this difficulty would be obviated.

3. The enforced absence of two members of the Board at the same time suspends the work of the Board. In the event of a serious and protracted illness this might result in great inconvenience. Moreover, as the members of the Board are appointed by the President, by and with the advice and consent of the Senate, the work of the Board might be crippled for a long period of time in the case of a death occurring while Congress was not in session.

It is believed that there is work enough for five men; but under the statute the Examiners-in-Chief, besides hearing appeals, are required to perform such other like duties as the Commissioner may assign them, so that in the event that there should not be enough appellate work to occupy the entire time of the five members other work of a supervisory character could be assigned to them by the Commissioner.

It is believed that it would be desirable to give the right of appointment of the Examiners-in-Chief, as well as of the Assistant Commissioners, to the President alone, instead of, as now, requiring confirmation by the Senate.

SCIENTIFIC LIBRARY.

Our valuable library is in present need of reorganization and enlargement. The collection of books, periodicals, and foreign patents is of the utmost value to the examining corps, inventors, manufacturers, and attorneys interested in investigating the novelty of inventions, but the material is not and never has been in condition for ready reference. Much of it is practically unavailable. I have started the work of reclassifying and indexing, with a view to meeting more nearly the peculiar needs of those who use the library. This library of about seventy-five thousand volumes of scientific works and about two million foreign patents, used, as it is, by people who are doing work which is almost identical with that of the examining corps, requires a librarian of special training and ability. General library training alone is not sufficient to enable one to understand the problems upon which those who use the library are working. The librarian should not only know library methods, but he should be trained in the art of searching. It is difficult to find any one with the necessary qualifications for the \$2,000 salary now provided by law. I believe, however, that by assigning a member of the examining corps and giving him opportunity of instruction of library methods in the Library of Congress the best results obtainable can be secured.

To this end I should be given authority to detail members of the examining corps for a short time to the Library of Congress for special instruction in library work.

Moreover, as it is difficult to induce members of the examining corps who might be interested in library work to forego chance of advancement, the salary of the librarian should be increased to that of a Principal Examiner and the salary of the assistant librarians should be made to conform to those of Assistant Examiners in the different grades.

I greatly appreciate the aid rendered to this Office by the Librarian of Congress and his chief classifier looking to the reorganization of our library.

CHANGES IN THE OFFICIAL GAZETTE.

It has been suggested that instead of publishing in the OFFICIAL GAZETTE selected claims, as is now the practice, there should be published a brief digest of the patents. These digests would be valuable to the examining corps and aids in searching. It would be necessary, however, to employ a corps of digesters large enough and highly trained enough to digest intelligently more than a hundred patents a day. The expense of this work would be largely, if not entirely, saved by the decrease in the cost of printing, since the digests would not be as extensive as the claims now printed. But the changes sug-

gested, if deemed advisable, could not be put into effect without legislation providing for the necessary increase in the force.

CONDITION OF THE WORK IN THE OFFICE.

On February 1 of last year, of the applications pending in the Office, there were 26,195 which were awaiting official action. At the present time, January 31, 1914, there are 28,437 cases awaiting official action, showing that the Office has fallen behind about two thousand two hundred applications. During the week when the examinations for promotions were held there was a loss of 2,583 cases. As there are about two hundred and eighty thousand actions required in all cases pending each year, it will be seen that the loss in the number of applications during the examination-week was about one-half of a week's work. This loss can probably be avoided in the future, and if there should be no increase in the number of applications filed the force can care for the current business as well as it is doing the work at the present time.

The more serious problem, however, is to bring the work of the Office up to date, so that there shall be no unreasonable delay in passing upon an application after it has been filed. At present there are awaiting action as many new applications as are filed in two months and as many old applications as are amended in one month.

The number of applications awaiting action in the different divisions is very different, and the time required to reach an application for action in different classes is very different. Generally speaking, those classes in which there is greatest activity are those in which there is the greatest delay, and, it may be added, delays in such cases are of special hardship. Such delays can never be entirely avoided, because sudden developments of activity in different classes occur, and the work in those classes falls seriously behind before new men can learn the particular art sufficiently for proper examinations of the applications. We are endeavoring to make such improvement of conditions as is practicable with the present force. With the moderate increase in the force suggested heretofore conditions could be very greatly improved.

DELAYED APPLICATIONS.

I have caused an examination to be made in each of the examining divisions to ascertain the number of applications filed as much as fifteen years ago. Seventy-nine such applications have been reported as pending. This is considerably less than one in a thousand of all the applications now pending before the office. They have been prosecuted in accordance with the existing statutes, and it is not believed that any change of the statute which might be made to correct the evil of long delay in prosecution would destroy rights under any application now pending before the Office. It has therefore seemed that the only practical policy for correcting the existing evil is to bring pressure on the examining force and the applicants and their attorneys to have old cases prosecuted to allowance or abandonment. With this end in view I have issued an order that all cases

which have been pending before the Office for more than eight years shall be made special, and to the end that there may be a uniform ruling applied to all such cases I have directed that no amendment filed in any such application after June 1 of this year shall be entered without the approval of the Commissioner. I hope to be able to make it impossible for an applicant to prosecute his application by dilatory or time-consuming amendments by refusing to enter amendments which are not proper responses to Office actions and in appropriate cases holding the applications to be abandoned.

I am also considering the propriety and wisdom of making these old applications public. The statute contains no provision against it. There is, however, a rule of the Office, under which they have all been filed, which declares that the applications shall be preserved in secrecy. I shall make further report on this point in my next report.

Little advantage will result from getting rid of the old cases now pending if others are permitted to take their places. I believe that with proper administration it is possible to limit the time during which an application may be kept pending in the Office to less than five years, and perhaps to less than three years, without unduly reducing the applicant's right to consideration of his case. However, as there are many thousands of applications now pending in the Office which have been here over three years, I have not found it physically practicable to treat them at once and have therefore limited my order so far to those which have been in the Office over eight years.

Few applicants who keep their cases in the Office for many years deliberately are entitled to favorable consideration. It is believed that the consequence of the application of this conviction on the part of the Commissioner to the delayed cases will satisfy applicants of the wisdom of prosecuting their cases promptly. Every effort will be made to eliminate this evil of long-pending applications. If during the course of a year this has been substantially accomplished, it is believed that no legislation will be necessary to prevent the recurrence of the evil. Should my efforts, however, along this line prove to be ineffectual, I shall in my next report to Congress recommend appropriate corrective legislation.

In conclusion it may be stated that on an average applications are in the Office about two years, and in the vast majority of cases this length of time is sufficient for thorough consideration of the applicant's claims.

CLASSIFICATION.

The primary function of the Patent Office is to ascertain and apply properly to any application for a patent all existing patents and literature which have a legitimate bearing adverse to the claims presented. To do this with any degree of success, it is essential that the American and foreign patents and the literature of the various arts collected in the Scientific Library should be so classified and indexed as to enable the Examiners rapidly to find all existing patents and other publications bearing

upon the application being searched. The system of classification which grew up in the Office prior to 1898 has been found to be no longer adequate, and since that date a force of classifiers has been engaged in an attempt to work out a new and improved system of classification. Out of 1,085,000 United States patents, 517,000 have been assigned to their proper places under the new classification. It has been ascertained that each assistant in the Classification Division is able on an average to classify about two thousand patents a year. This means that with the present force it would require about sixteen years to complete the classification. It has been estimated that if the force should be doubled the classification could be completed in seven years. To complete the classification within three years would require an addition to the examining force of seventy-five men. This would involve an increase in the pay-roll of about one hundred and fifty thousand dollars for classifiers, besides the necessary clerical assistance, which would probably increase it \$40,000 more. When the work was once accomplished, however, it would immensely increase the value to the public of the work done by the Office. Meanwhile the delay in the completion of the classification work impairs the work of the Office to a serious extent.

During the ensuing year it is my intention to study the problem of completing the classification, with a view to laying before Congress in my next report a definite plan, with estimates of the necessary expense involved, and to urge that a sufficient appropriation be made to complete the work as expeditiously as the Office space and other facilities available make possible.

EXCHANGE OF PATENTS WITH CANADA.

Shortly after assuming the duties of the Commissioner of Patents my attention was directed by the chief of the Patent Office of Canada to an agreement between the Canadian and United States Patent Offices for the exchange of copies of patents. Under this agreement the exchange of these copies began in the early part of 1899 and continued until September of that year, when it was suspended by the United States Patent Office. Upon examination of the correspondence between the two Governments and from conversations with the Hon. J. W. Lynch, chief of the Canadian Patent Office, who came to Washington in September, 1913, for this purpose, I found that there was no sufficient reason for the termination of the agreement on the part of the United States Patent Office. I accordingly directed the resumption of the exchange of these copies of patents, beginning with the issue of October 7, 1913; but in view of the very large number of copies of patents that must be drawn from the stock on hand to fill in between September of 1899 and October 7, 1913, I hesitate to direct the supply of these missing copies without the specific approval of Congress.

In my judgment the contract between the two Governments is still binding, and the United States

Patent Office, as a matter of good faith, should be authorized to take immediate steps to fulfil its part under that contract. The Office has for many years regularly exchanged its patents with England, France, Germany, Switzerland, and other countries.

LEGISLATION.

(a) *Assignments.*

One of my predecessors, Commissioner Benton J. Hall, in his annual report to Congress for the year 1887, said:

Section 4898 provides that an assignment, grant, or conveyance shall be void as against any subsequent purchaser or mortgagee for a valuable consideration without notice unless such instrument be recorded in the Patent Office within three months from the date thereof. In my opinion, this requirement operates unjustly in providing that an assignment, if recorded after three months from the date thereof, shall have no effect as constructive notice to a subsequent purchaser or mortgagee for a valuable consideration. The provision in my judgment should be modified so as to declare that while the assignment should be valid without recording for the period of three months from and after its date, thereafter it should be void against any subsequent purchaser or mortgagee for a valuable consideration without notice, unless it be recorded in the Patent Office prior to the date of such subsequent purchase or mortgage, so that should the assignee fail through forgetfulness or accident to file his instrument or assignment within three months he might still file it for record at a subsequent period, and it should then give constructive notice from the date of its actual filing.

I concur in the views expressed here and the suggested amendment to the law to carry it into effect.

Under section 4934 of the Revised Statutes, originally enacted in 1870, the maximum fee for recording each "assignment, agreement, power of attorney, or other paper" was three dollars. Assignments have been and are now being received and recorded weekly that embody hundreds of patents and thousands of words. Recently, for example, there were recorded eight writings, three of which contained 966 patents, applications, and trademarks, and the legal fees for recording the eight writings were thirty dollars, under the Revised Statute mentioned, as amended May 27, 1908. The actual time occupied by the clerical force in verifying and supplying missing data of these patents, digesting, indexing, recording, and comparing, was 172 hours, equivalent to the time of one clerk for twenty-four and four-sevenths days. At a minimum fee of fifty cents per hour, legally chargeable for this class of work, the cost to the Office for recording these writings was eighty-six dollars, nearly three times the amount paid therefor.

In addition to the number of words in writing presented for record a nominal fee for each additional patent, application, design, trade-mark, or invention enumerated therein should, in my judgment, be charged. It is therefore suggested that twenty-five cents be charged for each of said additional items. I may add that this recommendation was included in the report to Congress of the investigation of the United States Patent Office by the President's Commission on Economy and Efficiency in December, 1912, and reference is made therein to this matter on pages 185-196.

It is therefore recommended that section 4934 be suitably amended to provide for this change in fees. A proper amendment will be submitted at an early date for consideration of Congress.

(b) Assignees' index.

In 1870 a special appropriation was made by Congress for the purpose of indexing all prior recorded deeds, assignments, etc., under the name of the inventor, and all assignments recorded since that date have been so indexed. Under this law, pursuant to the records established thereby, it is necessary to know at least the name of the applicant or inventor to make the necessary search to run down a chain of title. Experience has shown that it is frequently necessary or desired by attorneys, inventors, and the general public to ascertain what patents are owned by a particular individual, firm, or corporation.

There is no authentic manner at present in which such search can be made except in each of the volumes wherein are recorded assignments and the data of the application, where they are indexed from assignor to assignee. It is therefore very desirable that a consolidated assignees' index be established and kept up to date in the Patent Office for this purpose. Requests are frequently made for such an authentic, verified, and checked index from which a reliable search may be made to ascertain what patents are owned by given corporations, firms, or individuals. To perform this service it is believed that three more index clerks will be required in addition to those now employed in the Assignment Division, and for the indexing covering the past seventeen years five or six additional clerks will probably be needed to bring up its arrearage within a reasonable time.

I will therefore submit at an early date to Congress a request for authority to establish this index and a request for additional clerks for this purpose.

(c) Clerks of courts to file decrees.

I would also suggest that the law be amended to require the clerks of the Federal courts to file in this Office a copy of every decree granting or refusing an injunction in a suit for infringement of a patent and every final decree affecting the validity of a patent.

If such copies were filed in this Office and placed in the file of the patent, it would enable any one to determine the litigation in which this patent had been involved—a thing which is now practically impossible, since many of the decisions of the lower courts are not published.

(d) Antitrust statute.

The applicability of a general antitrust statute to patents has been established by recent decisions of the Supreme Court of the United States. Doubtless any further antitrust legislation would be applied by the Court in the same manner.

As the effect of the proposed general antitrust legislation upon the patent system can only be surmised after the legislation has been worked out in detail and the bills now pending before the Congress are undergoing discussion and amendment, it is thought that any discussion of the subject in this report would be premature. It will therefore be left for discussion before the appropriate committees.

(e) Protection of designs.

The present method of protecting designs is cumbersome and so costly that designers make little use of it. The problems of a court in passing upon the validity and infringement of design patents are so simple, generally speaking, as not to require the assistance of expert opinion. Little or nothing, therefore, is gained by examination prior to the granting of a patent. It is recommended that protection of designs be put upon a registration basis and the fees be greatly reduced.

(f) Witnesses to applications.

Section 4888 of the Revised Statutes, requiring that the signature of the inventor to the specification and claims be attested by two witnesses, and section 4889 of the Revised Statutes, requiring that the signature of the inventor or his attorney in fact to the drawing be attested by two witnesses, involve this Office in a great deal of work, and frequently the omission of the signature of a witness postpones the filing date of an application for patent. In many other cases it necessitates the filing of substitute specifications, properly witnessed, and this imposes upon the Office the entirely unnecessary work of carefully comparing the substitute specification with the original, to guard against errors and omissions, as well as departures from the original disclosure.

In some cases the return of a drawing for the addition of the signature of a witness has resulted in the loss of the drawing and sometimes in the mutilation thereof to such a degree as to necessitate a new drawing. Yet, as far as I can ascertain upon inquiry, no witness has ever been called into court to verify his signature.

The oath can readily be amended to contain an acknowledgment of the signature to the specification. This seems to me to be sufficient, and I suggest an amendment to the sections of law referred to omitting the requirement as to witnesses to signatures.

(g) Subpœna duces tecum.

The present statute does not provide for *subpœna duces tecum* in interference cases. This remedy should be provided by amending section 4906 of the Revised Statutes by adding thereto the statement that the provisions of section 869 of the Revised Statutes with relation to the issuance of a *subpœna duces tecum* shall apply to contested cases in the Patent Office.

(h) Protection of exhibitors at the Panama-Pacific International Exposition.

An act has been passed by Congress for the protection of exhibitors at San Francisco which, it seems to me, is open to the following serious objections:

1. That because the basis of the right to protection is not limited to inventions or discoveries or the works of an author, but the right is made dependent merely upon the exhibitor being the proprietor of a foreign patent or registration, the provisions of the act purporting to grant protection in the nature of a copyright or patent are void, as they do not fall within the grant of power to Congress to promote

science and the useful arts by granting to authors and inventors for a limited period the exclusive right to their writings, inventions, or discoveries.

2. Because the trade-mark provisions of the act are not in any way limited as to the character of the trade to which they are applicable this part of the act is void as not within the grant of power to Congress to regulate interstate and foreign commerce. It is urged that the title and the essential nature of the bill limit it to foreign commerce. I think the point at least very doubtful.

3. Because inventions of utility embracing arts, machines, and other complex subjects-matter are made the basis of grants, which should have been, in the interest of the public, limited to patterns, designs, models, and manufactured articles embodying the patterns and designs. The ordinary patent litigation is sufficiently difficult and complicated. Any litigation where intricate inventions may be involved and where a fundamental question is whether a certain exhibit is protected by foreign patents will exceed in complexity and difficulty anything with which we have ever had experience.

4. Together with the creation of these new and

ill-defined rights, penalties, heretofore unknown in the patent system, of the severest character have been provided, while, on the other hand, the defenses that might be urged are entirely left to conjecture.

5. Finally, the protection which all exhibitors will desire against suits for infringement based upon exhibition at the exposition, such as was provided for at the St. Louis and Chicago expositions, has been omitted.

It is believed that this act should be modified by limiting it to designs and articles embodying designs or patents protected abroad and by adding the provision against suits for infringement based upon exhibits.

Attention is called to the fact that an appropriation will be necessary to cover the expense of administering the act. It has not been possible to determine the amount which will be needed, and some time will probably elapse before this can be properly estimated.

Respectfully submitted.

THOMAS EWING,
Commissioner.
